# B. TECH. <br> (SEM-III) THEORY EXAMINATION 2019-20 ENGINEERING MECHANICS 

Time: 3 Hours
Note: 1. Attempt all Sections. If require any missing data; then choose suitably.
SECTION A

1. Attempt all questions in brief. $\quad 2 \times 10=\mathbf{2 0}$

| Q no. | Question | Marks | CO |
| :--- | :--- | :--- | :--- |
| a. | The resultant of two forces $\mathrm{F}_{1}$ and $\mathrm{F}_{2}$ is at right angle to $\mathrm{F}_{1}$. Find the <br> angle between the forces. | 2 |  |
| b. | State and explain the principle of transmissibility of forces. | 2 |  |
| c. | The force required to pull a body of weight 50 N on a rough horizontal <br> surface is 15 N. Calculate the coefficient of friction if the force is <br> applied at an angle of $15^{\circ}$ with the horizontal. | 2 |  |
| d. | What do you understand by point of contraflexure? | 2 |  |
| e. | Calculate the bending moment at centre of a simply supported beam <br> carrying uniformly distributed load. | 2 |  |
| f. | State the law of conservation of momentum. | 2 |  |
| g. | Define D'Alembert's principle. | 2 |  |
| h. | What is energy? Explain the various forms of mechanical energies. | 2 |  |
| i. | Find the minimum diameter of a steel wire, which is used to raise a load <br> of 4000 N if the stress in the rod is not to exceed $95 \mathrm{MN} / \mathrm{m}^{2}$. | 2 |  |
| j. | Define modulus of rigidity and bulk modulus. | 2 |  |

## SECTION B

2. Attempt any three of the following: $\mathbf{3 \times 1 0}=\mathbf{3 0}$

| Q no. | Question | Marks | CO |
| :--- | :--- | :--- | :--- |
| a. | A body resting on a horizontal surface required a pull of 24 N inclined at <br> $30^{\circ}$ to the horizontal just to move it. It was also found that a push of 30 <br> N at $30^{\circ}$ to the plane was just enough to cause the motion to impend. <br> Make calculation for weight of the body and coefficient of friction | 10 |  |
| b. | A simply supported beam of length 5 m carries a uniformly increasing <br> load of $800 \mathrm{~N} / \mathrm{m}$ at one end to $1600 \mathrm{~N} / \mathrm{m}$ at the other end as shown in <br> figure 2. Calculate the reaction at both the ends. | 10 |  |

## SECTION C

## 3. Attempt any one part of the following: <br> $1 \times 10=10$

| Q no. | Question | Marks | CO |
| :--- | :--- | :--- | :--- |
| a. | ABCD is a square, each side being 20 cm and E is the middle point of <br> AB. Forces of 7, 8, 12, 5, 9 and 6 KN act on the lines of direction AB, <br> EC, BC, BD, CA and DE respectively. Find the magnitude direction and <br> position of the resultant. | 10 |  |
| b. | Two identical rollers, each of weight 50 N, are supported by an inclined <br> plane and a vertical wall as shown in fig. Find the reactions at the point <br> of supports A, B and C. Assume all the surfaces to be smooth. | 10 |  |

4. Attempt any one part of the following:
$1 \times 10=10$

| Q no. | Question | Marks | CO |
| :--- | :--- | :--- | :--- | :--- |
| a. | Draw shear force and bending moment diagram for given overhanging <br> beam as shown in fig. | 10 |  |
| b. |  |  |  |

Paper Id: $\qquad$
199355
Roll No:

|  |  |  |  |  |  |  |  |  |  |
| :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- |

5. Attempt any one part of the following:
$1 \times 10=10$

| Q no. | Question | Marks | CO |
| :--- | :--- | :--- | :--- | :--- |
| a. | Locate the centroid of the area of the parabolic shaded portion shown in <br> figure . | 10 |  |

6. Attempt any one part of the following:
$1 \times 10=10$

| Q no. | Question | Marks | CO |
| :---: | :---: | :---: | :---: |
| a. | A stone is dropped from the top of a tower 50 m high. At the same time, another stone is thrown upwards from the foot of the tower with a velocity of $25 \mathrm{~m} / \mathrm{s}$. When and where the two stone cross each other? | 10 |  |
| b. | The motion of a particle is given by $\mathrm{a}=\mathrm{t}^{3}-3 \mathrm{t}^{2}+5$, where ' $a$ ' is acceleration in $\mathrm{m} / \mathrm{s}^{2}$ and ' t ' is time in seconds. The velocity of the particleat $\mathrm{t}=1$ second $6.25 \mathrm{~m} / \mathrm{s}$ and the displacement is 8.8 m . Calculate the displacement and velocity at $\mathrm{t}=2$ seconds. | 10 |  |
| 7. | Attempt any one part of the following: | $1 \times 10=10$ |  |
| Q no. | Question | Marks | CO |
| a. | Define stress and its types, strain and its types. What do you mean by strain energy? | 10 |  |
| b. | Determine the diameter of a solid shaft which will transmit 300 KW at 250 rpm . The maximum shear stress should not exceed $30 \mathrm{~N} / \mathrm{mm}^{2}$ and twist should not be more than $1^{\circ}$ in a shaft length of 2 m . take modulus of rigidity $=1 \times 10^{5} \mathrm{~N} / \mathrm{mm}^{2}$. | 10 |  |
